

Acronal[®] 4420

	Binder used to bond nonwoven fabrics and to coat and impregnate non-woven and knitted fabrics			
Chemical Nature	Acronal 4420 is an aqueous dispersion of a heat-crosslinking copolymer of acrylic esters. It does not contain any plasticizers Properties			
Typical Properties	Solids content pH	%	~ 50.0 ~ 5.0	
Other properties of the dispersion	Apparent viscosity at 23 °C (Brookfield RVT, Spindle #1, a	cps at 50 rpm)	50 – 200	
	Density Ionic charge Anionic Miscibility with water Low-temperature stability	g/cm ³	approx. 1.07 Anionic Miscible in all proportions Sensitive to frost	
Properties of the film	Glass transition temperature (DSC) Appearance Surface finish	°C	approx. –11 Clear, transparent Tack-free	
Compatibility with	Handle		Soft	
Polymer dispersions	Compatible with the other anionic and nonionic polymer dispersions in our range			
Thickeners	Compatible with Rheovis AS 1125, Rheovis PU 1215, and Rheovis AS 1420, and watersoluble cellulose derivatives			
Resins	Compatible with Urecoll [®] and Saduren [®] resins			
	We would recommend testing the stability of formulations that contain Acronal 4420 in advance before they are processed			
Crosslinking	The films that Acronal 4420 forms by the evaporation of water are already partially crosslinked on drying. The degree of crosslinking can be increased by heating them to a temperature of $150 - 180$ °C.			
	Catalysts such as maleic acid, phosphoric or ammonium hydrogen phosphate can be used to increase the rate of the crosslinking reaction.			
Resistance to solvents	The films formed by Acronal 4420 are insoluble in water and most organic solvents once they have been crosslinked, but they do swell on solvation.			
	* These values should not be taken as specification			

Applications

and the hydrophobicity of the film that it forms. It can also be used to bond nonwovens. It particularly appropriate choice for bonding wet-laid nonwovens that are made from inorganic fib Processing Acronal 4420 can be applied by all conventional wet impregnation, spraying and coating technique Customers should carry out their own trials when developing products based on Acronal 4420 compatibility with other ingredients, its adhesion on different fibers and its stability in storage, or are affected by a variety of factors that are too numerous for us to take into account in our own trials Safety The usual safety precautions when handling chemicals must be observed. 	Areas of Application	Acronal 4420 is mainly used for water-repellent coatings on account of its low emulsifier content and the hydrophobicity of the film that it forms. It can also be used to bond nonwovens. It is a particularly appropriate choice for bonding wet-laid nonwovens that are made from inorganic fibers.			

Please refer to the "Handling and Storage of polymer dispersions" brochure. Technical information regarding the storage of BASF polymer dispersion products is available upon request.

Important

The descriptions, designs, and data contained herein are presented for your guidance only. Because there are many factors under your control which may affect processing or application/use it is necessary for you to make appropriate tests to determine whether the product is suitable for your particular purpose prior to use. NO WARRANTIES OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE MADE REGARDING PRODUCTS DESCRIBED OR DESIGNS, OR INFORMATION SET FORTH, OR THAT THE PRODUCTS, DESIGNS, OR DATA MAY BE USED WITHOUT INFRINGING THE INTELLECTUAL PROPERTY RIGHTS OF OTHERS. IN NO CASE SHALL THE DESCRIPTIONS, DATA OR DESIGNS PROVIDED BE PRESUMED TO BE A PART OF OUR TERMS AND CONDITIONS OF SALE. Further, you expressly understand and agree that the descriptions, designs, and data furnished by BASF hereunder are given gratis and BASF assumes no obligation or liability for same or results obtained from use thereof, all such being given to you and accepted by you at your risk.
