Technical Information

general additive to increase conductivity

Efka® IO 6782 increases the conductivity of coating systems. This is es-

pecially important for electrostatically sprayed paints.

chemical nature cationic compound, halogen-free

Properties

physical form clear yellowish liquid

shelf life Efka® IO 6782 should be stored in a cool and dry place. When kept in

original unopened containers, it has a total shelf life of 4 years from the

date of manufacture.

When stored at low temperatures, the product may become hazy and crystallize. These effects do not influence the quality of the product, they

can be reversed by heating.

typical properties (no supply specification)

solvent isobutanol density at 20 °C (68 °F) ~ 0.95 g/cm³ active ingredients > 70 %

flash point ~ 27 °C (81 °F)

Application

Efka® IO 6782 can be used in most kinds of coating systems containing polar and non-polar solvents.

In paints containing only white spirit, Efka® IO 6782 should be prediluted with butanol at 1:1 or 1:2 proportions to improve efficiency by improving solubility and distribution.

Since Efka® IO 6782 is of cationic nature, compatibility with other parts of the recipe should be tested before use. Anionic components may react with Efka® IO 6782 and thus reduce efficiency. Wetting agents from the Efka® 4000 and Efka® 5000 series can be used without limitation.

recommended concentrations

The usual concentration is 0.1 - 1.0 % by weight as supplied based on the total formulation.

Efka[®] IO 6782 should be added at the end of the preparation of the batch.
