Hydropalat[®] WE 3221

general chemical nature	 silicone surfactant to improve substrate wetting in aqueous systems excellent substrate wetting in aqueous industrial, wood, automotive and exterior paints and coatings and printing inks strong reduction of surface tension no increase of surface slip minor impact on inter coat adhesion and recoatability blend of organically modified polysiloxane (silicone surfactant) with dipropylene glycol monomethyl ether 	
Properties		
physical form	clear colorless, low-viscosity liquid	
storage	Hydropalat [®] WE 3221 should be stored in tightly closed containers and in a cool place.	
typical properties	Solid content density (DIN 51757) color (Gardener)	~ 45 % ~ 1.00 g/cm ³ max. 2
Application		
	Hydropalat® WE 3221 shows strong reduction of surface tension in water based systems. Therefore it is highly suitable to improve substrate wetting and to prevent surface defects. It is recommended as an anti-crater additive with good recoatability. Furthermore Hydropalat® WE 3221 can be used in UV-curable formulations to improve flow and leveling. Based on a short chain organically modified polysiloxane Hydropalat® WE 3221 does not increase surface slip.	
recommended concentrations	A dosage of 0.2 – 1.0% (as supplied) calculated on total formulation is recommended.
