

Joncryl[®] 652-A

Product Description	Joncryl 652-A is an emulsion of a specialty resin developed for water-based inks and overprint varnishes.
Key Features & Benefits	<ul style="list-style-type: none">- Heat resistance- Rapid resolubility- Hydrophilic nature of the polymer- Can be used as a main or modifying resin
Chemical Composition	Carboxylated acrylic copolymer in water

Properties

Typical Properties	Appearance		white emulsion
	Non-volatile	%	50
	pH at 25°C		2.5
	Acid number (NV)		136
	Molecular weight (Mw)		19,900
	Viscosity at 25°C	cps	100
	Density at 25°C	g/cm ³	1.10
	MFFT	°C	< 5
	Tg	°C	105

These typical values should not be interpreted as specifications.

Applications

Joncryl 652-A is an emulsion of a specialty resin designed for use in water-based inks and overprint varnishes. This product is recommended as effective modifying binders improving gloss, hardness, and heat resistance of formulations based on softer resins or grinding bases.

Joncryl 652-A is recommended for applications such as:

- Water-based inks
- A single let-down water-based overprint varnish on all flexographic inks for paper sacks and corrugated board applications
- Water-based paper/paperboard coatings
- A binder in poster paints or drawing inks

When used in water-based inks, this product demonstrates excellent machine stability and resolubility, due to the hydrophilic nature of the polymers.

Its efficiency and heat resistance offer the possibility to use it as a let-down varnish on all flexographic inks for paper sacks and corrugated board (pre-print and post-print) applications. It is also compatible with resin emulsions for use in higher-end applications.

Other uses include paperboard coatings (neutralized or in emulsion form), paper coatings, or as a binder in poster paints or drawing inks.

The efficiency of Joncryl 652-A is demonstrated by its concentration needed to reach a given viscosity, as shown in the table below:

Processing

For water-based inks formulated at pH 8.5, Joncryl 652-A must be pre-neutralized.

Neutralization

Joncryl 652-A can easily be converted to a neutralized solution with various alkali. However, since the solution is significantly more viscous than the emulsion, it is highly recommended that Joncryl 652-A be diluted with water prior to neutralization. The relevant alkali can then be added with stirring to form the required solution.

Although Joncryl 652-A will very quickly reach its final viscosity, it is suggested practice to allow the neutralized solution to stabilize before re-checking the pH and viscosity. The neutralized solution of Joncryl 652-A offers the advantage of building a clear solution.

Below are typical alkali used as neutralizing agents:

Alkali	Weight %
Ammonia (20%)	10.2
Monoethanolamine (MEA)	7.3
Dimethylaminoethanol (DMAE)	10.7
Aminomethylpropanol (AMP)	10.5
Morpholine	10.4
Triethanolamine (TEA)	17.8

Note: Weight % of alkali to 100 grams of Joncryl 652-A for a pH 8.5

Additional Formulation Recommendations

Compatibility with organic solvents

Joncryl 652-A will tolerate water-miscible solvents such as alcohols, glycol ethers, and low boiling esters or ketones. However, the tolerance is limited to about 20 – 30% of the resin solid weight. Neutralized Joncryl 652-A has a high tolerance to pH changes but becomes rapidly insoluble when the pH drops below 7.0.

Compatibility with other resins

Joncryl 652-A in its neutralized solution, has a wide compatibility with a variety of other water-based resins. Specifically, it is compatible with most acrylics, styrene acrylics, polyesters, and rosin-modified maleic resins.

Compatibility with pigments

Neutralized Joncryl 652-A is compatible with most alkali-stable pigments. Care must be taken with certain pigments due to adverse interactions with trace elements present in them. Specific care must be taken when using calcium and barium lithols since trace metal ions can crosslink the polymer giving rise to gelation. High pH (above 9.0) or additions of EDTA before grinding can overcome this problem.

In order to obtain good compatibility with basic dyes, it is necessary to add up to 10% of alcohol or glycol ether to the neutralized Joncryl 652-A and to dissolve the dyestuff in a similar solvent plus water.

In most cases, a significant increase in color development can be achieved by the use of the neutralized Joncryl 652-A as a let-down resin for pigment grinding bases. For suitable grinding resins, please contact our Technical Service Department.

Crosslinking

Since Joncryl 652-A is a carboxylated polymer, it will crosslink with a number of reagents, such as urea or melamine formaldehydes, azridines, or zinc or zirconium compounds.

Water-based flexographic inks

May be used as a let-down resin in conjunction with a grinding resin at about 7 – 20% of total formulation.

Overprint varnishes

May be used as a sole or modifying resin in combination with an emulsion resin.

Safety

General

The usual safety precautions when handling chemicals must be observed. These include the measures described in Federal, State and Local health and safety regulations, thorough ventilation of the workplace, good skin care and wearing of protective goggles.

Safety Data Sheet

All safety information is provided in the Safety Data Sheet for Joncryl 652-A.

Storage

Please refer to the "Handling and Storage of Polymer Dispersions" brochure.

Important

The descriptions, designs, and data contained herein are presented for your guidance only. Because there are many factors under your control which may affect processing or application/use it is necessary for you to make appropriate tests to determine whether the product is suitable for your particular purpose prior to use. **NO WARRANTIES OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE MADE REGARDING PRODUCTS DESCRIBED OR DESIGNS, OR INFORMATION SET FORTH, OR THAT THE PRODUCTS, DESIGNS, OR DATA MAY BE USED WITHOUT INFRINGING THE INTELLECTUAL PROPERTY RIGHTS OF OTHERS. IN NO CASE SHALL THE DESCRIPTIONS, DATA OR DESIGNS PROVIDED BE PRESUMED TO BE A PART OF OUR TERMS AND CONDITIONS OF SALE.** Further, you expressly understand and agree that the descriptions, designs, and data furnished by BASF hereunder are given gratis and BASF assumes no obligation or liability for same or results obtained from use thereof, all such being given to you and accepted by you at your risk.
